

Global leader in liquid analysis

Endress+Hauser recognized with Frost & Sullivan's 2020 Global Liquid Analyzer Company of the Year Award

Based on its recent analysis of the global liquid analyzer market, the market research and consulting firm Frost & Sullivan honored Endress+Hauser as the 2020 Global Company of the Year. The Group impressed the jury with its robust product line, customer-oriented approach and industry-leading knowledge of liquid analysis.

The global Company of the Year Award recognizes a high degree of innovation with products and technologies and the resulting leadership in terms of customer value and market penetration. "Customer-oriented innovation is the base of our success strategy," said Dr Manfred Jagiella, Managing Director of Endress+Hauser Liquid Analysis. As a member of the Group's Executive Board, he is responsible for the analytical business.

Cutting-edge sensor technology

Endress+Hauser became a forerunner in the digital instrumentation and solutions market with the introduction of Memosens sensors in 2004. The company's technology redefines the concept of liquid analysis as it converts the measured value to a digital signal and transfers it to the transmitter without contact. "Endress+Hauser is developing the next generation of Memosens technology with additional diagnostics and functionality. Such initiatives enable it to stay ahead of the product innovation curve," said Janani Balasundar, Frost & Sullivan Industry Analyst.

Eliminating key challenges of maintenance

Endress+Hauser eliminates key maintenance challenges through its analyzers. For example, the Liquiline System CA80PH orthophosphate analyzer decreases operating costs through its low reagent consumption. It also ensures high equipment availability through automatic calibration, automatic cleaning, and easy, tool-free maintenance. For quick troubleshooting, the multiparameter handheld Liquiline Mobile CML18 can be combined with Memosens sensors to help plant technicians swiftly check any plant measuring point.

Ready for Industry 4.0

Additionally, Endress+Hauser's new-generation Heartbeat Technology offers continuous process and device diagnostics, documented verification without process interruption and information for predictive maintenance. "It enhances the functions of devices by using process data to support process optimization and predictive maintenance strategies," noted industry analyst Janani Balasundar.

With the IIoT ecosystem Netilion, all measurements, process data and field device diagnostics can be used for cloud-based applications. For example, the company's digital services monitor the health status of devices, analyze the installed base of instruments and help organize asset files and documents. According to Janani Balasundar, "With Endress+Hauser's solutions, the industry can be ready for Industry 4.0."

Endress+Hauser received Frost & Sullivan's 2020 Global Liquid Analyzer Company of the Year Award.

The Endress+Hauser Group

Endress+Hauser is a global leader in measurement and automation technology for process and laboratory applications. The family company, headquartered in Reinach, Switzerland, achieved net sales of over 2.6 billion euros in 2019 with a total workforce of 14,000.

Endress+Hauser devices, solutions and services are at home in many industries. Customers thus use them to gain valuable knowledge from their applications. This enables them to improve their products, work economically and at the same time protect people and the environment.

Endress+Hauser is a reliable partner worldwide. Own sales companies in 50 countries as well as representatives in another 70 countries ensure competent support. Production facilities on four continents manufacture quickly and flexibly to the highest quality standards.

Endress+Hauser was founded in 1953 by Georg H Endress and Ludwig Hauser. Ever since, the company has been pushing ahead with the development and use of innovative technologies, now helping to shape the industry's digital transformation. 8,000 patents and applications protect the Group's intellectual property.
